VIRTSANÄYTE KUVAOHJE, POJAT ENGLANNINKIELINEN (MID STREAM URINE TEST, BOYS)

Potilasohje Tulostettu 12.03.2025

Urine sample collection: Instructions for boys

- 1. You can collect the sample when it has been at least 4 hours since the child last urinated.
- 2. You have received a lidded container and a depressurised sample tube for sample collection. Do not remove the tube cap!
- 3. Wash your hands.
- 4. Retract the child's foreskin.
- 5. Wipe the urinary meatus with 3–4 clean and damp toilet tissues.
- 6. Dry with a toilet tissue.
- 7. Remove the sample container lid. First, let the child urinate a little into the toilet.

- 8. Collect an uninterrupted stream of the child's urine (2/3 of the container). Do not touch the inside of the container. The child can let the rest of the urine run into the toilet.
- Close the sample container lid tightly and remove the lid label. Place the container on a table.
- Press the sample tube cap first all the way against the sampling needle until urine flows into the tube. Wait until the tube is full.
- Turn the tube upside down five times.

Return this document with the sample, fill in the following information:

Name:

Fill in this document, and deliver it and the sample tube to the laboratory as soon as possible.

	Personal identity code:
Fimlab	Time passed since the last urination: hours.
